

What is the Tech Sector

NORTH OF TYNE
COMBINED AUTHORITY

The technology sector, or 'Tech' sector, is made up of businesses that sell goods and services in electronics, software, computers, artificial intelligence, and other industries related to information technology (IT). Tech companies invest heavily in research and development and may undertake riskier projects with greater future potential.

None-tech companies rely on the technology sector to help them grow and thrive.

Do I need a degree to work in the Tech Sector?

Although some jobs will require a degree, there are several jobs in technology that you don't - web developers, software developers, and computer support specialists are some examples.

If a degree isn't for you, having a large portfolio of coding work or other certifications may help get your foot in the door.
